VetRecover

America's women veterans are the fastest-growing

Women veterans have tripled their share of the veteran population, growing from 4% in 2000 to 12% in 2025—the fastest-growing veteran demographic segment representing 2.1 million women veterans

Source - [Serving Her Country: Exploring the Characteristics of Women Veterans \(data.va.gov\)](https://data.va.gov/).

Women veterans face 2-3x higher health risks Yet generic healthcare treats them like civilian women

Women veterans face dramatically elevated health risks compared to non-veteran women (25% vs 10%), 2.76x higher PTSD/depression (40% vs 14.5%), and 2x higher iron deficiency (24% vs 12%)

Source - [Improving Support for Veteran Women: Veterans' Issues in Focus \(pmc.ncbi\)](#)

Higher risk demands tailored support and for most veterans, it stops at the clinic

This is the 'Execution Gap'. The VA provides 5 hours of expert clinical care per year. But managing a chronic condition requires 1,460 hours of daily patient effort. Patients are left to manage this overwhelming burden alone.

Source - [National Planning Strategy \(va.gov\)](#), [Time Needed for Self-Care \(nih.gov\)](#)

the opportunity

We can change that by bridging the clinic-to-home gap and giving women veterans the daily support they actually need.

the solution

VetRecover

Meet VetRecover, a 12-week virtual nutrition and health co-pilot built exclusively for women veterans. It bridges the gap between what the VA recommends and what women can actually do in real life.

the solution

We translates VA labs and clinical guidance into realistic food and routine plans that fit real life.

the solution

We offer women-only, trauma-sensitive support that understands service, stress, caregiving, and changing bodies.

the solution

And help her prepare for appointments, safely coordinate food and meds, and move through care with confidence.

VetRecover is focused on guidance & execution for veteran women, offering differentiated value from organizations in the space

VetRecover could help nearly 500K veterans optimize nutrition recovery by 2034

eligible user base grows from 1,050 women veterans with program access in 2025 to 420,000 by 2035, representing a 400x expansion driven by institutional partnerships with health systems, employers, and VA facilities

VetRecover generates superior health outcomes for women veterans, offering differentiated value from generic nutrition apps and traditional VA programs.

VetRecover: Women Veteran Journey Map

Why? Trauma-informed, women-only community + same-coach continuity = retention.

VetRecover generates superior health outcomes for women veterans, offering differentiated value from generic nutrition apps and traditional VA programs.

Why? Trauma-informed, women-only community + same-coach continuity = retention.

Medication–nutrition timing conflicts are invisible to generic apps but critical to women veterans' health outcomes.

VetRecover's unified medication tracker + automated interaction checking + personalized meal coordination ensures:

Iron absorption optimized by avoiding calcium timing conflicts

Drug efficacy maximized

Side effects minimized

Veteran adherence optimized

This is clinical–grade medication management wrapped in nutrition coaching—competitors can't match.

VetRecover bridges the **gap** between VA clinical care and daily nutrition behavior—a gap competitors cannot fill.

Result

VA clinicians refer us patients because we make their jobs easier and follow their recommendations. That's institutional stickiness.

VA Partner refers cohort → 70% complete → Show clinical outcomes → Partner refers next cohort → System compound advantage

10 Year Revenue Projection Model

350 Women/Partner, Utilization 10%→25%

This is the 'Execution Gap'. The VA provides 5 hours of expert clinical care per year. But managing a chronic condition requires 1,460 hours of daily patient effort. Patients are left to manage this overwhelming burden alone.

10 Year Revenue Projection Model

350 Women/Partner, Utilization 10%→25%

Year	# of Partners	Eligible	Utilization	Active Users	Annual Revenue	Cumulative Revenue	% of SAM
Year 1	3	1,050	10%	105	\$52.5K	\$52.5K	0.02%
Year 2	12	4,200	12%	504	\$252K	\$304.5K	0.08%
Year 3	35	12,250	14%	1,715	\$858K	\$1.16M	0.29%
Year 4	75	26,250	16%	4,200	\$2.1M	\$3.26M	0.70%
Year 5	150	52,500	18%	9,450	\$4.73M	\$7.99M	1.58%
Year 6	250	87,500	20%	17,500	\$8.75M	\$16.74M	2.92%
Year 7	400	140,000	21%	29,400	\$14.7M	\$31.44M	4.90%
Year 8	600	210,000	22%	46,200	\$23.1M	\$54.54M	7.70%
Year 9	850	297,500	24%	71,400	\$35.7M	\$90.24M	11.90%
Year 10	1,200	420,000	25%	105,000	\$52.5M	\$142.74M	17.50%

THE BIG PICTURE

VetRecover is the gateway to whole-person health for women veterans, giving the VA a new continuous engagement channel

We have 3 key ways to connect with the target market

VA Veteran

Direct access to women veterans through VA care pathways and pilots

Insurance

Covered nutrition support via value-based and preventive care programs

Institutions / Universities

Employer- and campus-backed wellness programs for women veterans

Risks Associated

Platform Expansion by Function Health, & Noom

- Labs
- AI coaching
- GLP-1 support

Scope-of-Practice Confusion

- Practicing medicine
- Giving medical advice
- Managing medications

Adoption Friction in a High-Burden Population

- Feels like “one more thing”
- Suffers from dropout
- Engagement failure kills
B2B pilots

Key Takeaways

- 1 Post-deployment health decline is driven more by loss of structure than by loss of fitness
- 2 Prolonged ration-based diets create lingering gut and cognitive effects that outlast deployment
- 3 Fatigue in women veterans is frequently misclassified as “stress” rather than investigated as deficiency
- 4 Military culture trains endurance not self-monitoring which delays help-seeking
- 5 The real gap is not treatment, it’s what happens between appointments when mental health meets real life
- 6 Women veterans often leave visits feeling responsible for “figuring it out” on their own

VetRecover Features

PERSONALIZED MEAL PLANS

Military-aligned nutrition blueprints bring precision meal planning to veteran women's health. The system analyzes individual risk profiles iron deficiency, bone health, metabolic syndrome, GLP-1 support, fatigue, or stress eating and generates weekly meal patterns optimized for each veteran's unique health challenges and military lifestyle constraints.

VetRecover Features

TRAUMA-INFORMED COACHING

Women-veteran-only coaching creates a safe space for health transformation. Twice-weekly sessions with dedicated coaches trained in military culture and MST awareness provide personalized support, barrier troubleshooting, and incremental goal-setting. Between sessions, veterans access text support, daily reminders, and educational resources designed specifically for military women's needs.

VetRecover Features

MEDICATION-FOOD COORDINATION

Comprehensive medication management prevents dangerous interactions and optimizes nutrient absorption. The system tracks all VA-prescribed medications, community-care prescriptions, OTC drugs, and supplements in one unified list. Automated interaction checking flags food-drug conflicts, timing issues, and supplement interference, then generates personalized daily timelines showing exactly when to take each medication and what to eat—or avoid—at specific times.

VA VISIT PREPARATION

Structured visit preparation transforms veteran-provider communication. The system generates comprehensive visit packets 1-2 weeks before appointments, including risk map summaries, complete medication lists, symptom patterns, and veteran-authored questions. Communication scripts and assertiveness coaching help veterans advocate confidently. Post-visit integration ensures new clinical guidance flows seamlessly into meal plans and medication schedules.

Visit Preparation

Ready for Your Appointment

Auto-Generated

Visit Preparation Packet

Dr. Johnson • Primary Care • Dec 20, 2024

Generated: Dec 6, 2024 (2 weeks before visit)

1. RISK MAP SUMMARY

Iron Deficiency (HIGH)

Bone Health (MODERATE)

Change: Fatigue improved 30% since last visit

2. MEDICATIONS & SUPPLEMENTS

Levothyroxine 50mcg - Daily (VA)

Ozempic 0.5mg - Weekly (Community) CHANGED

Iron 65mg - Daily (OTC)

Calcium 500mg + Vit D - 2x daily (Supplement)

3. SYMPTOM TRENDS (12 Weeks)

Fatigue Level

Sept

Improving

Dec

Pattern: Fatigue worse when iron supplement skipped

4. QUESTIONS FOR PROVIDER

Can we check ferritin levels? I've been very fatigued since deployment.

Should I get a DEXA scan? Early menopause + deployment history.

GLP-1 causing nausea - what foods help?

5. LAB REQUEST CHECKLIST

Ferritin

Vitamin D

HbA1c

Rationale: Persistent fatigue, bone health risk, diabetes management

Page 1 of 1 • Generated by VetNutrition Coach

Communication Scripts

Speak Up With Confidence

Assertiveness Coach

Communication Scripts:

OPENING STATEMENT

I've been tracking my eating and energy for 12 weeks with a health coach. Can I share a one-page summary?*

BONE HEALTH CONCERN

I'm concerned about my bone health because of my deployment history and early menopause. Can we check my vitamin D levels and discuss a DEXA scan?*

NOT BEING DISMISSED

I understand you're busy, but this fatigue is affecting my ability to work and care for my kids. What tests can we run?*

Appointment Tips:

Best appointment times: Morning slots (providers have more time)

Bring with you: Visit packet, all pill bottles, notebook

Virtual vs. In-person: Choose in-person for complex issues

VA System Navigation:

Request Labs via MyHealthVet

Secure Messaging → Provider → Lab

Post-Visit Integration

Seamless Care Coordination

Auto-Syncing

1 Visit Debrief in Next Session

Coach Notes:

Dr. ordered: Ferritin, Vitamin D, TSH

Started new iron prescription 325mg

Veteran felt heard and validated

2 Care Plan Auto-Updates

Meal Plan Iron dinners added

Med Schedule New timing added

Risk Map Updated priorities

3 Lab Results Interpretation

Results Arrived:

Ferritin = 12 ng/mL

Coach Explanation:

This is quite low and explains your fatigue. Normal range is 15-150. Great catch!*

You advocated for yourself!
